Project Title : Workshop Registration & Confirmation App

Abstract

The Workshop Registration & Confirmation App is a web-based application developed using React.js. It helps institutions manage workshop registrations efficiently. Participants can register by entering their details, and the system stores the information, displays a confirmation message, and prevents duplicate registrations using email validation. The application provides a simple and user-friendly interface for managing workshop participants.

Problem Statement

Many institutions manage workshop registrations manually, which can lead to duplicate entries, data loss, and inefficient participant tracking. A digital system is required to automate the registration process and maintain participant records accurately.

Objectives

- Create an online workshop registration form.
- Store participant details.
- Display registration confirmation messages.
- Prevent duplicate registrations using email verification.
- Provide an easy-to-use interface for users.

Project Scope

- Register participants for workshops.
- Store participant information locally.
- View registered participant list.
- Prevent duplicate entries.
- Generate instant confirmation messages.

Technologies Used

- React.js
- JavaScript (ES6)
- HTML5
- CSS3
- Local Storage (Browser)

Application Tools

- Visual Studio Code
- Node.js
- npm
- React Developer Tools

Google Chrome

Modules

Module 1: Registration Form

Collects:

Name

Email

Phone Number

Module 2: Duplicate Check

Checks whether the email already exists.

Module 3: Participant List

Displays all registered participants.

Module 4: Confirmation Message

Shows successful registration message.

Key React Concepts Used

Functional Components

useState Hook

useEffect Hook

Event Handling

Conditional Rendering

List Rendering

Local Storage

Expected Output

User enters registration details.

Details are stored successfully.

Confirmation message is displayed.

Duplicate registrations are prevented.

Participant list is shown.

#SOURCE CODE

```
import React, { useState, useEffect } from "react";

import "./App.css";

function App() {
  const [name, setName] = useState("");
  const [email, setEmail] = useState("");
  const [phone, setPhone] = useState("");
  const [participants, setParticipants] = useState([]);
  const [message, setMessage] = useState("");

  useEffect(() => {
    const data = JSON.parse(localStorage.getItem("participants")) || [];
    setParticipants(data);
  }, []);

  useEffect(() => {
    localStorage.setItem("participants", JSON.stringify(participants));
  }, [participants]);

  const handleSubmit = (e) => {
    e.preventDefault();
```

```
const exists = participants.find(
  (participant) => participant.email === email
);

if (exists) {
  setMessage("Participant already registered!");
  return;
}

const newParticipant = {
  name,
  email,
  phone,
};

setParticipants([...participants, newParticipant]);
setMessage("Registration Successful!");

setName("");
setEmail("");
setPhone("");
};

return (
  <div className="container">
    <h1>Workshop Registration</h1>

    <form onSubmit={handleSubmit}>
```

```
<input
  type="text"
  placeholder="Enter Name"
  value={name}
  onChange={(e) => setName(e.target.value)}
  required
/>
```

```
<input
  type="email"
  placeholder="Enter Email"
  value={email}
  onChange={(e) => setEmail(e.target.value)}
  required
/>
```

```
<input
  type="text"
  placeholder="Enter Phone"
  value={phone}
  onChange={(e) => setPhone(e.target.value)}
  required
/>
```

```
<button type="submit">Register</button>
</form>
```

```
{message && <p>{message}</p>}
```

```
<h2>Participant List</h2>
```

```
<ul>
```

```
  {participants.map((participant, index) => (
```

```
    <li key={index}>
```

```
      {participant.name} - {participant.email}
```

```
    </li>
```

```
  )})
```

```
</ul>
```

```
</div>
```

```
);
```

```
}
```
